Objective

I am seeking an engineering role on a strong team, where I can leverage my skills to drive meaningful impact. I aim to comfortable managing and leading, but I prefer to remain close to the technology and contribute hands-on.

Skills

I have worked in technology leadership roles (Lead Developer, startup CTO) for most of my career, but I have always been a polyglot developer at heart. Most recently, I've been working with pretty typical modern web stacks, primarily consisting of Next.js, React, Tailwind CSS, Zustand, Tanstack Query with Python powering FastAPI or Flask backends. Mostly deployed on AWS via CDK.

The vast majority of my professional career has been spent doing some sort of web based development in various environments (C, Java, ASP, ASP.NET, Ruby/Rails, Python/Django, Clojure/ClojureScript, Erlang, Elm and Haskell) but I am comfortable with a number of other languages and enviroments as well.

I have strong SQL and database skills. PostgreSQL and Redis are my favorite SQL and NoSQL datastores, respectively, but I am experienced and comfortable with many others.

Professional Experience

Interos Inc. *VP Engineering, 2018-1/2024*

Helped build the engineering organization from the ground up. Built and managed the front-end software development team, which was consistently one of the top performing teams in the company for my entire tenure. I also performed the initial integration of Looker BI as a feature of our product.

Our technology stack was Next.js, React, Tailwind on the frontend talking to a Python/FastAPI backend in front of PostgreSQL. This was part of a microservices architecture interacting via Kafka. Deployed on AWS.

Superpowers Corp (Boulder, CO) *Co-founder and Software Engineer, 2017-2018*

Co-founded and lead development of Slack-based Chatbot and Smart To-Do List mobile app as well as Slack-based Chat bots.

Technology stack included k8s/Docker, Elm, Haskell and JavaScript with a PostgreSQL database. Deployed on Google Cloud.

TalkIQ (San Francisco, CA) *Co-founder and Software Engineer, 2014-2016*

Co-founded and helped lead a team building a machine-learning based business intelligence solution to improve performance of sales teams. Acquired by DialPad for \$50m.

Technology stack was primarily Python and PostgreSQL with assorted telephony components such as Twilio and Asterisk PBX. Deployed on AWS.

Atomic Labs (San Francisco CA) *Software Engineer, 2013-2014*

Helped fill gaps in portfolio companies' software development needs.

I worked several disparate technology stacks during this time but the largest portion of my time was spent working on a backend application written in Go. Deployed primarily on Google Cloud with some AWS.

Suprmass (Los Angeles, CA) *Co-founder and CTO, 2012-2013*

Co-founded and helped lead a team building a marketplace for hackers, tinkers, inventors, and makers.

The technology stack primarily consisted of Python, Django and Flask with MySQL databases. Deployed on AWS.

eBay (San Jose, CA) *Software Engineer, 2010 - 2/2012*

Arriving at eBay via the Milo.com acquisition I helped integrate Milo's technology with eBay and other eBay acquisitions as well as developing next-generation crawling technology.

The core of our technology stack remained from Milo.com but we were integrating with a lot of Java-based internal web services. Deployed internally.

Milo.com (Palo Alto, CA) *Co-Founder and CTO, 2007 - 2010*

Co-founded and helped lead a team building a comparison shopping engine for local stores. Raised \$5m in funding. Acquired by eBay for \$75m.

Technology stack was primarily Python, Django and Flask with PostgreSQL and Redis databases. Deployed on Heroku and AWS.

J.P. Evans, Inc. (Reston, VA) *Founder and President, 2001 - 2007*

Founded and lead my own software development consulting company servicing Fortune 500 companies such as Freddie Mac and Verisign.

Regrettably this period was filled with Lots of enterprise Java, JBoss, WebLogic and EJBs. Deploy on-prem.

Prior Experience

Prior to 2001, software development of some sort or another at: Commix, Proximcom, Discovery Channel, Comscore, Cyveillance and others.
